SUMMARY OF FINDINGS

New South Wales

Seasonally adjusted estimates

In November 1994 there were 2,679,700 people **employed** in NSW. This was an increase of 76,100 from November 1993.

The **unemployment rate** in November 1994 was 8.8%, the same as the October rate. The rate was 9.1% for males and 8.5% for females. The NSW rates for males, females and persons were less than the corresponding Australian rates of 9.5%, 9.0% and 9.3% respectively.

The number of **unemployed** people was estimated at 259,200 in November 1994. This was similar to the October estimate but 52,600 lower than in November 1993. Males represented 59% of the unemployed, compared with 60% in November 1993.

The **participation rate** stood at 61.7% overall, with a rate of 72.1% for males and 51.7% for females.

In November 1994 the size of the **labour force** was estimated at 2,938,900 people. This was an increase of 23,500 over the previous 12 months.

UNEMPLOYMENT RATE, NOVEMBER 1994
(Seasonally adjusted)

Trend series estimates

The number of **employed** people in NSW was 2,686,500 in November 1994. The trend estimate of employed people has increased each month since March 1993.

The overall trend **unemployment rate** was 8.8%, as compared to 10.6% in November 1993. A downward movement has occurred each month since November 1993. The November 1994 rate was the lowest unemployment rate since July 1991.

The trend estimate of **unemployed** people in November 1994 was 259,700. There has been a decrease in each month since November 1993 and a decrease of 49,200 in the 12 months to November 1994.

The trend series **participation rate** was 61.9% in November 1994, compared to 61.7% in November 1993.

In November 1994 the trend estimate of the **labour force** stood at 2,946,200. The estimate has shown an upward trend since April and has increased by 37,200 since November 1993.

Regions of NSW

While the Labour Force Survey is designed primarily to produce reliable estimates at the national and State/Territory level, it also delivers estimates for a number of regions within States.

As with national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding estimates at the State level — and are thus based on a considerably smaller sample size — they are subject to higher relative standard errors. Care should therefore be taken in interpretation of regional estimates, particularly month to month movements. Tables of standard errors are included in the Technical Note on page 44–48 of this publication.

Sydney

In November 1994 the estimate of the number of people **employed** in the Sydney Major Statistical Region (MSR) was 1,758,400. This was an increase of 46,400 in the 12 months since November 1993.

In November 1994 the **unemployment rate** was 7.7%, a decrease of 1.7 percentage points since November 1993.

The unemployment rates within Sydney (MSR) varied between 13.4% in Fairfield–Liverpool Statistical Region (SR) and 3.4% in Northern Beaches (SR).

The **participation rate** for Sydney (MSR) was 63.5%, the same as the November 1993 rate. The rate for males was 73.4% and for females 54.0%. Gosford–Wyong (SR) recorded the lowest participation rate of 54.6% while the highest rate was 69.1% in Northern Beaches (SR).

Balance of NSW

In November 1994 the number of **employed** people in this area of NSW was 926,500, an increase of 29,900 since November 1993.

In November 1994 the **unemployment rate** was 9.3%, a decrease from 11.3% in November 1993.

Overall the unemployment rate varied from 5.9% in Murray–Murrumbidgee (SR) to 11.9% in Newcastle (SRS).

The participation rate for the Balance of NSW (MSR) was 58.0% in November 1994. The rate for males was 68.9% and for females 47.3%.

UNEMPLOYMENT RATE, REGIONS OF NSW, NOVEMBER 1994

Sydney (MSR)

Balance of NSW (MSR)

Duration of unemployment

In November 1994 the **long term unemployed** (52 weeks and over) represented 39% of the total unemployed. This compares with 42% in November 1993.

The average duration of unemployment was 71.2 weeks in November 1994, having increased from 63.6 weeks in November 1993.

Average duration of unemployment increased with age reaching an average of 92.3 weeks for people aged 45 years and over.

AVERAGE DURATION OF UNEMPLOYMENT, NSW

Age

Between November 1993 and November 1994, an increase in employment was recorded by all age groups except 25–34 year olds. The younger age groups showed the largest gains in employment, with an increase of 10% for 15–19 year olds and 8% for those aged 20–24 years.

Part-time workers represented an estimated 23% of all employed people in November 1994, but this proportion varied between the age groups. The highest levels were among those aged 15–19 years with 59% and those aged 65 years and over with 40%.

Estimated unemployment rates have decreased for all age groups in the 12 months to November 1994. The rate was highest for 15–19 year olds at 17.8% then declined through the older age groups with the lowest rate of 6.5% for people aged 55 and over. Nearly 40% of 15–19 year olds were looking for part-time work.

Industry and occupation

The industries with the largest number of employees in NSW in November 1994 were *Retail trade* with 398,200 (or 15% of the total), *Manufacturing* with 369,300 (14%) and *Property and business services* (252,600 or 9%).

Manufacturing employed the largest number of people in Sydney (MSR) with 15% of the total while *Retail trade* had the largest number in Balance of NSW (MSR) with 17%.

The largest occupation group in NSW was *Clerks* with 465,000 employees (17% of the total). This was also the largest occupation group in Sydney (MSR) with 334,200 employees (19%) while *Labourers and related workers* with 155,800 (17%) was the largest group in Balance of NSW (MSR).

Between November 1993 and November 1994 five of the eight occupation groups showed increases in employment. The largest increases were in *Labourers and related workers* (12%) and *Salespersons and personal service workers* (10%). The largest decrease was in *Plant and Machine operators and drivers* which fell by 6%.

SUMMARY OF FINDINGS

Australian Capital Territory

Note: Seasonally adjusted estimates are not available for the ACT.

Trend series

The trend estimate of the number of **employed** people in the ACT in November 1994 was 155,200, an increase of 2,200 people since November 1993. Employment has increased slightly in each month since March 1994.

EMPLOYED PERSONS, ACT
(Trend)

The trend **unemployment rate** was 7.5% in November 1994. The rate for males (8.0%) was higher than for females (6.9%) while in November 1993 the male and female rates were identical (7.6%). The overall unemployment rate declined to 6.8% in May 1994 before rising gradually over the next six months.

In November 1994 the trend estimate of the number of **unemployed** people in the ACT was 12,600, the same as in November 1993. As a proportion of the total unemployed, males increased from 54% in November 1993 to 57% in November 1994.

UNEMPLOYMENT RATE
(Trend)

The **participation** rate in November 1994 was 73.2%, a small decrease on the November 1993 figure of 73.4%. The participation rate was 80.1% for males and 66.7% for females in November 1994.

The ACT **labour force** was estimated at 167,700 in November 1994, 2,100 higher than in November 1993.

Age

In November 1994 the unemployment rate in the ACT decreased with age, with the highest rate (21.2%) among people aged 15–19 years. The rate was 8.6% for people aged 20–24 years and 3.7% for those aged 25 years and over.

The majority (74%) of employed 15–19 year olds worked part-time, and over half (56%) of the unemployed in this age group were looking for part-time work. The average hours worked per week by those aged 15–19 years was 17.8.

The proportion of employed people who worked full-time increased in the older age groups (70% of 20–24 year olds and 82% of people aged 25 years and over). On average those aged 20–24 years worked 32.7 hours per week and those 25 years and over worked 36.8 hours per week.

The participation rate varied between 62.1% for those aged 15–19 years to 80.1% for those aged 20–24 years. Amongst 15–19 year olds who were not in the labour force 82% were attending school.

UNEMPLOYMENT RATE BY AGE, ACT

Duration of unemployment

In November 1994 the average duration of unemployment in the ACT was 39.4 weeks.

The long term unemployed (52 weeks and over) represented 22% of all unemployed people in November 1994. This was a decrease from November 1993, when the proportion was 26%.

Among males the long term unemployed were 20% of the total, while for females the estimate was 25%.

AVERAGE DURATION OF UNEMPLOYMENT, ACT

Country of birth

In November 1994 nearly three-quarters of the labour force (74%) in the ACT were born in Australia with a further 11% born outside Australia in the *main English speaking countries*. However, people born outside Australia in *other than main English speaking countries* recorded the highest levels of unemployment and made up over a quarter (26%) of unemployed people in the ACT.

Industry and occupation

In November 1994, the industry division with the most employees in the ACT was *Government administration and defence* with 37,000 employees or nearly a quarter (24%) of the total. This was followed by *Retail trade* with 21,400 employees (14% of the total) and *Property and business services* (18,100 or 12%).

The largest occupation group was *Clerks* with nearly a quarter (24%) of employed people and 38% of employed women. Overall this group increased by 3,900 (about 11%) in the last 12 months to reach 38,300 in November 1994.

Professionals were the next largest group with 19% of employed people. This was the largest occupation group among males (22%). Between November 1993 and November 1994, the *Professionals* group decreased by 4,200, the largest fall in an occupation group over this period.

NOTE

This publication contains estimates of the civilian labour force in NSW and the ACT derived from the Labour Force Survey component of the Monthly Population Survey, which is conducted on a sample basis throughout Australia.

Explanatory notes for the data contained within this publication can be found on page 40.

Care should be taken in the interpretation of month-to-month movements in estimates. During the period September to December 1992 a new sample for the Labour Force Survey was introduced, which has increased the variability of estimates of month-to-month movements. See paragraphs 4–6 of the Explanatory Notes or *Information Paper: Labour Force Survey Sample Design* (6269.0), available from any ABS office.

GREG BRAY

(a) While the Labour Force Survey is designed primarily to produce reliable estimates at the national and State/Territory level, it also delivers estimates for a number of regions within States. As with national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding estimates at the State level — and are thus based on a considerably smaller sample size — they are subject to higher relative standard error. Care should therefore be taken in interpretation of regional estimates, particularly month to month movements. Tables of standard errors are included in the Technical Note on pages 43–47 of this publication. (b) Previously Manly–Warringah (SR). (c) Excludes components of Far West (SD). These are published as part of Balance of NSW (MSR).

LONG TERM UNEMPLOYED AS A PROPORTION OF TOTAL UNEMPLOYED, ACT

LABOUR FORCE SUPPLEMENTARY TOPICS

Although emphasis in the population survey is placed on the regular collection of data on demographic and labour force characteristics, supplementary and special surveys of particular aspects of the labour force are carried out from time to time.

NEW DATA SERVICES

From January 1995, certain publications containing the results of labour force supplementary surveys have been discontinued. However, data from these surveys will continue to be made available in various ways:

The principal results from labour force supplementary surveys will be released in *The Labour Force, Australia* (6203.0). At the same time, the Standard Data Service for a supplementary survey will be available, priced between \$17.50 and \$20.00, and including tables formerly included in the supplementary publications. Equivalent tables at the State level will still be available on microfiche. In addition, other unpublished data can be provided to meet special requirements.

The Labour Force, Australia, December 1994 will contain the principal results of the following two supplementary surveys (conducted in August 1994):

- Trade Union Membership
- Weekly Earnings of Employees (Distribution)

EXPLANATORY NOTES

Introduction

This publication contains estimates of the civilian labour force derived from the labour force survey component of the monthly population survey, which is conducted on a sample basis throughout Australia.

The population survey

2. This survey consists of the labour force survey (LFS) and, in most months, one or more supplementary topics. The survey is based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covers slightly less than one-half of one per cent of the population of New South Wales. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

Scope

3. The labour force survey includes all persons aged 15 years and over, except:

- (a) members of the permanent defence forces;
- (b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- (c) overseas residents in Australia; and
- (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

Survey sample redesign

4. Following each Population Census, the ABS redesigns and reselects the LFS to take into account the new information which is obtained from the Census. The sample used in the LFS from September 1987 to August 1992, which was designed and selected using data from the 1986 Census, has been updated and reselected using information collected in the 1991 Census. The new sample was phased in over the period September 1992 to December 1992.

5. For the most part, one quarter of the new sample was introduced each month so that, by December 1992, the entire new sample was in place.

Potential effects on labour force survey estimates

6. Implications for estimates produced from the LFS due to sample redesign and its implementation are as follows.

- (a) The sampling error overall increased initially by about seven per cent over the previous level but will decline gradually during the life of the new sample. For State estimates, the initial increase

was about 8 per cent, while for the Territories, there was a decrease of 19 per cent. There were also higher standard errors for movements produced over the period September 1992 to December 1992 compared with those for the corresponding series produced prior to this period and from January 1993 onwards. Overall, these were estimated to be up to 20 per cent higher than the normal standard errors on monthly movements.

- (b) Analysis has shown that the unemployment rate is marginally higher (less than 0.5 percentage points on average) for those persons in sample for the first time. Normally, this will not affect the overall estimates of month-to-month movements because the number of persons in the sample does not change significantly. However, during the transition period, there were twice as many people as usual in the sample for the first time. This may have caused a small upward movement (of less than 0.1 percentage points on average) in the unemployment rate from August 1992 to September 1992 and a compensating decrease from December 1992 to January 1993.

7. For further information, see *Information Paper: Labour Force Survey Sample Design* (6269.0).

Definitions

8. The labour force category to which a person is assigned depends on the actual activity undertaken during the reference week (i.e. whether working, looking for work, etc.). The following definitions, which conform closely to the international standard definitions specified by the International Labour Office (ILO), relate only to those persons within the scope of the survey.

9. *Employed persons* comprise all civilians aged 15 years and over who, during the reference week:

- (a) worked for one hour or more for pay, profit, commission or payment in kind (including employees, employers and self-employed persons) in a job or business, or on a farm; or
- (b) worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or

- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.
10. Prior to April 1986, unpaid family helpers who worked for 1 to 14 hours were excluded from the category of employed persons.
11. Employed persons can be classified into:
- full-time workers* (i.e. those who usually worked 35 hours or more a week (in all jobs) and others who, although usually part-time workers, worked 35 hours or more during the reference week); and
 - part-time workers* (i.e. those who usually worked less than 35 hours a week and who did so during the reference week).
12. *Unemployed persons* are all those aged 15 years and over who were not employed during the reference week, and:
- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week, and:
 - were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
 - were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
 - were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.
13. *Actively looking for work* includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service notice-boards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.
14. *The unemployment rate* for any group is the number unemployed expressed as a percentage of the labour force (i.e. employed plus unemployed) in the same group.
15. *The labour force* comprises all persons who, during the reference week, were employed or unemployed as defined above.
16. *Long term unemployed* comprises persons unemployed for a period of 52 weeks or more.
17. *Persons not in the labour force* are those who, during the reference week, were not in the categories *employed* or *unemployed* as defined above.
18. *The labour force participation rate* for any group is the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group.
19. *Duration of unemployment* is the period from the time the person began looking for work or was stood down to the end of the reference week.
20. *Unemployed persons classified by industry and occupation.* Unemployed persons who had worked full-time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.
21. *Industry classification.* From August 1994, Labour Force Survey industry data are classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), a detailed description of which appears in *ANZSIC 1993* (1292.0). For further information about the application of ANZSIC to Labour Force Survey data, see *Information Paper Labour Force Survey: Introduction of ANZSIC for industry data* (6259.0).
22. *Occupation classification.* Occupation data are presented in accordance with the *Australian Standard Classification of Occupations (ASCO)* (1221.0 and 1222.0).
23. *Marital status.* In the labour force survey, persons are classified as *married* or *not married*. Persons are classified as *married* if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey.
24. *Persons attending school or a tertiary educational institution.* Persons attending school comprise those aged 15–19 years who, during the reference week, were enrolled full-time at secondary or high schools (including boarding school pupils). Persons attending a tertiary educational institution comprise those aged 15–24 years who were enrolled full-time at universities, colleges of advanced education, technical colleges, colleges of technical and further education, and theological colleges.
25. *Employment/population ratio.* For any group, the number of employed persons expressed as a percentage of the civilian population aged 15 years and over in the same group.

Statistical areas

26. The regional structure for NSW used in tables 16 to 21 is based on the Statistical Region structure of the Australian Standard Geographical Classification (ASGC). For further information concerning statistical areas, please refer to pages 48–50 and the publications *Regional Statistics, New South Wales* (1304.1) and *Australian Standard Geographical Classification* (1216.0).

Seasonal adjustment and trend estimation

27. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

- (a) Employment: 5 in 10 monthly movements
- (b) Unemployment: 7 in 10 monthly movements
- (c) Unemployment rate: 7 in 10 monthly movements
- (d) Participation rate: 9 in 10 monthly movements

28. Smoothing seasonally adjusted series produces a measure of the underlying trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson-weighted moving average to the respective seasonally adjusted series. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available.

29. Seasonally adjusted series for NSW appear in this publication in Table 2. Trend estimates for NSW and ACT appear in Tables 2 and 21 respectively. Seasonally adjusted data is not available for ACT.

Reliability of the estimates

30. Estimates in this publication are subject to sampling and non-sampling errors. The Technical Note on pages 43-47 of this publication gives information on these sources of error.

Related publications

31. Users may also wish to refer to the following related publications which are available from the ABS Bookshop:

Additional data

32. In addition to the labour force survey, the ABS publishes a wide range of supplementary labour market information. For details see page 39 of this publication.

33. The ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout, clerically-extracted tabulation. In general, a charge is made for providing unpublished information.

TECHNICAL NOTE ON DATA RELIABILITY

Sources of error

There are a number of possible sources of error in sample surveys and these can be classified into two types: *sampling error*; and *non-sampling error*.

Non-sampling errors

2. Non-sampling errors may arise as a result of errors in the reporting, recording or processing of the data and can occur even if there is a complete enumeration of the population. Non-sampling errors can be introduced through: inadequacies in the questionnaire; non-response; inaccurate reporting by respondents; errors in the application of survey procedures; incorrect recording of answers; and errors in data entry and processing.

3. It is difficult to measure the size of the non-sampling errors and the extent of these errors could vary considerably in significance from survey to survey, and from question to question. However, every effort is made in the design of the survey and development of survey procedures to minimise the effect of these errors.

Sampling errors

4. Sampling error is the error which occurs by chance because the data were only obtained from a sample, not the entire population.

Standard error of estimates

5. One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the *standard error* (SE). There are about two chances in three that a survey estimate is within one standard error of the figure that would have been obtained if all persons had been included and about nineteen chances in twenty that it is within two standard errors. That is, there are 19 chances in 20 that the true estimate is in the range—

$$X - 2 \times SE(X) \text{ to } X + 2 \times SE(X)$$

(Where X is the estimate)

The standard error of an estimate can be obtained from Table A. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in the table (see example below Table A).

6. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. * 3.4) to indicate they are subject to high standard errors and should be used with caution.

Relative standard errors

7. The standard error can also be expressed as a percentage of the estimate and this is known as the *relative standard error* (RSE). The RSE is determined by dividing the standard error of an estimate $SE(X)$ by the estimate X and expressing it as a percentage. That is,

$$RSE(X) = \frac{SE(X) \times 100}{X}$$

(where X is the estimate)

8. The look up list on the following page provides a guide for the calculation of standard errors and relative standard errors for a range of statistics.

METHODS FOR CALCULATING THE STANDARD ERRORS FOR SELECTED ESTIMATES

Note: The methods described below refer to the calculation of standard errors for NSW estimates. Standard errors of ACT estimates should be calculated from Table C, using column 2 (from September 1992) instead of Table A and column 3 (Monthly movements for December 1992–January 1993 onwards) instead of Table B.

<i>Measure of reliability to be determined</i>	<i>Method</i>
Standard errors of estimates of employed persons.	Determine the SE from Table A directly.
Standard errors of estimates of unemployed persons.	Multiply the SE from Table A by 1.06.
Standard errors of estimates of persons not in the labour force.	Multiply the SE from Table A by 1.1.
Standard errors of rates (e.g. the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).	Determine the RSE of the numerator (X) and the denominator (Y) then apply the following formula. $RSE(X/Y) = \sqrt{[RSE(X)]^2 + [RSE(Y)]^2}$
Standard error of average duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 1.3.
Standard error of median duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 2.0.
Standard error of monthly movements.	Using Table B, look up the SE of the larger estimate.
Standard error of quarterly movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.11.
Standard error of annual movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.3.

Linear interpolation

Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the *size of estimate* column in Tables A or B. Linear interpolation is best described using an example. In November 1994, there were 620,600 (X_e) employed persons working part-time in New South Wales. This estimate falls between the values 500,000 (X_l) and 1,000,000 (X_u) in Table A.

2. The standard error of the estimate is determined as follows.

$$\begin{aligned}
 \text{Firstly, calculate } F &= \frac{X_e - X_l}{X_u - X_l} \\
 &= \frac{620,600 - 500,000}{1,000,000 - 500,000} \\
 &= 0.24
 \end{aligned}$$

3. Secondly, calculate the standard error of the estimate, $SE(X_e)$ thus,

$$\begin{aligned}
 SE(X_e) &= SE(X_l) + (F \times [SE(X_u) - SE(X_l)]) \\
 &= 8,800 + (0.24 \times [11,300 - 8,800]) \\
 &= 9,400
 \end{aligned}$$

4. Therefore the standard error of the number of employed persons in November 1994 working part-time in New South Wales (620,600) is 9,400.

(a) Previously Manly-Warringah (SR). (b) The statistical local areas which comprise Far West (SD)—Broken Hill (C), Central Darling (A), and Unincorporated Far West—are included in Balance of NSW (MSR), but excluded from Northern, Far West-North Western and Central West (SRs).

REGIONS OF NSW

(a) Not published separately. (b) Excludes Far West (SD).

REGIONS OF SYDNEY (MSR)

(a) Not published separately.

For more information ...

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

Information Consultancy Service

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

National Dial-a-Statistic Line

0055 86 400

(Steadycom P/L: premium rate 25c/21.4 secs.)

This number gives you 24 hour access, 365 days a year for a range of statistics.

Electronic Data Services

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about these electronic data services, contact any ABS Office (see below).

Bookshops and Subscriptions

There is a large number of ABS publications available from ABS bookshops (see below Bookshop Sales for contact details). The ABS also provides a subscription service through which nominated publications are supplied by mail on a regular basis (telephone Subscription Service toll free on 008 02 0608 Australia wide).
